with Xno 1. The CUMA was Sequencially bize liarlindacture over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for CDNAs greater than 400bp and 1000 bp columns to enrich for CDNAs was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR i and Xho I. The phagemid was packaged with Gigapak II Gold and, upon titration on XLI Blue MRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's Exassist Interference resistance helper phage (catalogue # 21223) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual colns were selected and grown in 36-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concertsoffy) plasmid purification kit (Intirogen, Carlebad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAAGGTTAGAC) and 25% strength BigDye terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Tetrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified." manufacturer's instructions. Briefly: 1.5 ug mRNA was treverse transcribed using a hybrid oligo(df) linker-primer that contains an Xho I site. First strand synthesis was primed with the linker primer and transcribed using Moloney murine leukemia vitus reverse transcribes (MMLV-RT) and 5-methyl dCTP. The second strand was synthesized with DNA polymerase and RNase H. Complementary DNA was bluth ended with PFU DNA polymerase, ligated with BCR I adapters in the presence of ligase and digested with Xho I. The CDNA was sequentially size fractionated with Xho I. The CDNA was sequentially size fractionated

recombinants. Stratagene's Exassist Interference resistance helper phage (catalogue # 211203) was adopted to rescue plasmid DNA from the phages. Upon plating of the rescued library, individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the concerts of TWN plasmid purification kit (Invitrogen, Carlabad, CA) as instructed by the manufacturer. ESTS from the 5' end of the CDNA clones were generated with the universal M13 reverse primer (CAGGAAACGTATGAC) and 25% strength BigDyb terminator sequencing chemistry (Applied Biosystems, Foster City, CA). Sequencing reactions were performed on MJ Terrad thermal cyclers (MJ Research, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POPS polymer (Applied Biosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have 1 copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of 1.4% 11-50 and in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     119
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 179
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         239

490 bp mRNA linear EST 19-JUN-2002 gi37bi2.y1 Mouse Organ of Corti cDNA pBluescript Mus musculus cDNA clone gi37bi2 5', mRNA sequence.

DEFINITION RESULT 12 BQ565411 LOCUS

ACCESSION VERSION

EST analysis of gene expression in the mouse Organ of Corti at the onset of hearing

Kachar, B.

synthesized with DNA polymerase and RNase H. Complementary DNA was blunt ended with Pfu DNA polymerase, ligated with EcoR I adapters in the presence of ligate and digested with Xho I. The cDNA was sequentially size fractionated over Pharmacia Size Sep400 (Pharmacia, Uppsala, Sweden) and Clontech Chroma Spin-1000 (Clontech, Palo Alto, CA) columns to enrich for cDNAs greater than 400bp and 1000 bp, respectively. The CDNA was then directionally ligated to the Uni-ZAP XR vector, which had been predigested with EcoR I and Xho I. The phagemid was packaged with Gigapak III Gold and, upon titration on XLI Blue NRF' cells, the yield of the phage library was estimated to be 11,100,000 recombinants. Stratagene's ExAssist Interference resistence helper phage (catalogue # 211203) was adopted to rescued library individual cDNA clones were selected and grown in 96-well, 2 ml growth plate. Plasmid DNA was purified from 200 ul of saturated culture with the Concerto (TM) plasmid purification kit (Invitrogen, Canterset) end of the cDNA clones were generated with the universal Ml3 reverse primer (CAGGARAACCTRAGACC) and 25% strength Richber 1000
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            universal mis reverse primer. Curocontrol of Applied Blosystems, Foster City, CA). Sequencing chemistry (Applied Blosystems, Foster City, CA). Sequencing reactions were performed on MT Terrad thermal cyclers (MT Sesearch, Waltham, MA), and analyzed on 3700 automated capillary sequencers using POS5 polymer (Applied Blosystems, Foster City, CA). The frequency distribution of the library is as follows: 72% of genes have I copy; 14.3% 2; 12% 3-10; 1.4% 11-50 and 0.1% 51-150. As to gene function, 45% of genes are present in GenBank and have know function; 23% have hits in GenBank, but do not have assigned function; 12% are uncharacterized ESTs and 20% are unidentified."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          EST 25-APR-2001

                                                                                                                     The present invention describes novel MLP proteins and their encoding DDAs. The MLP proteins and DNAs have antinifialmentery and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

The invention relates to an isolated novel secreted polypeptide (I) and purelectide (II). (I) and (II) are useful for treating cancer, autoimmune diseases, wound healing disorder, infections, haematopoietic disorders, inflammatory disorders, infertility, neurological and isorders, inflammatory disorders, infertility, neurological and specification of seases, respiratory diseases, repiratory diseases, renal diseases, abnormalities and disorders caused by abnormal expression, production, function and/or metabolism of the genes, as vaccines for inducing immunological response in a mammal, and in screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polypeptides can be used as immunogens to produce antibodies immunospecific for the polypeptides, and to identify membrane-bound or soluble receptors. The polymelostides, and to identify membrane-bound or soluble receptors. The polymocleotides may be used as diagnostic reagents, in chromosome localisation studies, and in tissue expression studies. The present sequence represents the coding sequence of novel human secreted protein #12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          61 ATATTTATGGACCGTCTAGCTTCCAAGAAGCTCTGTGCAGATGATGAGTGTGTCTATACT 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     61 ATATITATGGACCGICTAGCTICCAAGAAGCICTGIGCAGATGAIGAGGGTGTGTCTATACT 120

The present sequence is that of Hyseq clone identification number 1637272, which was obtained from a human thymus CDMA library using standard PCR with primers specific for vector sequences flanking the inserts, sequencing by hybridisation sequence signature analysis, and Sanger sequencing techniques. This expressed sequence tag was used in the assembly of a full-length CDMA sequence (see AARESA3) encoding a novel human growth CDMA sequence (see AARESA3) encoding a novel human growth could tory-like polypeptide (GRLP, see AABESA7). The GRLP belongs to the same protein family as growth regulatory proteins growth factors, human melanoma derived growth regulatory proteins or melanoma inhibitory activity, catlle cartilage-derived cretinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive proteins. GRLP polypeptides and polynucleotides of the invention can be used in the prophylaxis, treatment (including gene therapy) can diagnosis of disorders and diseases caused by, or involving, cartilage development and maintenance, inhibition of melanoma cell growth and tumours, including neuroectodermal tumours such as and primers, for chromosome and gene mapping, in the recombinant production of protein, in the generation of antisense, ribozyme and peptide-nucleic acid molecules, and to produce transgenic animals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system disorders.
                                                                                                                                                                                                                                                                                                                Growth regulatory-like polypeptide; human; cartilage; melanoma; neuroectodermal tumour; glioma; cancer; gene therapy; diagnosis;

The present invention provides the protein and coding sequences of human PRO proteins. These are useful for treating or diagnosing a cardiovascular, endothelial or angiogenic disorder, including cardiac hypertrophy, trauma, cancer, age-related macular degeneration, atherosclerosis, hypertension, arterial restenosis, rheumatoid arthritis, angina, mycoardial infarctions, thrombophiebitis, lymphangitis, tumour angiogenesis (such as breast carcinoma and liver carcinoma) and wound healing. The present sequence is a coding sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           121 ATTICTCTGGCTAGTGCTCAAGAAGAITATAATGCCCCGGACTGTAGATTCATTAACGTT 180

                                                                         ABL88072 to ABL88258 encode the PRO proteins given in ABB84817 to
ABB85003. The PRO proteins and polymucleotides have cardiant, cytostatic,
antiangiogenic, hypotensive, vulnerary and antiatteriosclerotic
activities, and can be used in gene therapy. The PRO polymucleotides,
activities, and can be used in gene therapy. The PRO polymucleotides,
cardiachyscular, endothelial or angiogenic disorder in a mammal,
c a cardiach hypotrophy, trauma, cancer, age-related macular
c e.g. cardiach hypotrophy, trauma, cancer, age-related macular
c degeneration, atherosclerosis, hypertension, arterial restenosis,
c rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
c rheumatoid arthritis, angina, myocardial infarctions, thrombophlebitis,
c cardinoma) and wound healing The PRO polymucleotides have applications
c in molecular biology, including use as hybridisation probes, and in
chromosome and gene mapping. ABL88259 to ABL88267 represent primers and
c probes used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 CCCAGGAACTTGGTCAAGGAACAGCGTGTGTACCAGGAAGCTACCAAGGAAGTTCCCACC 360

One hundred and twenty two nucleic acids encoding PRO polypeptides, useful for treating a PRO related disorder and for diagnosing tumours such as lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to one hundred and twenty two nucleic acids encoding PRO polypeptides. The sequences of the 122 PRO polynucleotides encode human secreted proteins. The PRO nucleic acids, polypeptides, agonists and antegonists are useful for treating a PRO related disorder. The PRO polypeptides are useful for diagnosing tumours, especially lung cancer, colon cancer, breast tumour, prostate tumour, rectal tumour or liver tumour. The PRO polypeptides are useful for stimulating the proliferation of, or gene expression, in pericyte cells, for stimulating the proliferation or differentiation of chondrocyte cells, for stimulating the release of tumour necrosis factor-alpha from human blood, for stimulating or inhibiting the proliferation of normal human dermal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Godowski PJ;

fibroblast cells. The PRO polypeptide may also be used as molecular weight markers and for tissue typing. The PRO nucleic acids have applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping. BRR3356-ABR33657 represent human PRO protein coding sequences of the invention.

proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (BSTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   121 ATTTCTCTGGCTAGTGCTCAAGAATTATAATGCCCCGGACTGTAGATTCATTAACGTT 180

                                                                                                                                                                                                                         Isolated human growth regulatory-like polypeptide useful for treating e.g. Alzheimer's disease, cancer, autoimmune disorders, hyperproliferative disorders, coagulation disorders, and nervous system
                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a novel nucleic acid that was assembled from human thymus cDNA library-derived Hyseq clone identification number 16372272 (see AAH26341). A recursive identification number 16372272 (see AAH26341). A recursive sequences from different databases. A full-length sequence (see AAH26343) encoding novel human growth requlatory-like polypeptide (RRLP, see AABB2671) was subsequently obtained. Human GRLP belongs to the same protein family as growth regulatory proteins, belongs to the same protein family as growth regulatory proteins, carometric, human melanoma derived growth regulatory protein or melanoma inhibitory activity, cattle cartilage-derived retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (CD-RAP, 44% identity and 64% retinoic acid sensitive protein (cD-RAP, 64% identity and 64% retinoic acid sensitive growth and polynucleotides of the invention can diagnosis of disorders and diseases caused by, or involving, and diagnosis of disorders and maintenance, inhibition of melanoma cell content and maintenance, inhibition of melanoma cell content and maintenance, inhibition of melanoma cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AAAAAAGGGCAGCAGATCTATGTGTACTCAAAGCTGGTAAAAGAAAATGGAGCTGGAGAA

DNAS. The MLP proteins and DNAS have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAS can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Safe, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is that of a novel nucleic acid encoding human growth regulatory-like polypeptide (GRLP, see AAAB2671).
The sequence was assembled using human thymus cDNA library-derived Hyseq clone identification number 16372272 (see AAB26341) as seed, using software programs to pull additional sequences from Hyseq's proprietary database containing expressed sequence arg sequences, and by gel sequencing using primers to extend both 5' and 3' ends. The predicted protein has a mol.wt. of 14 kba unglycosylated. GRLP belongs to the same protein family as growth regulatory protein, growth factors, human melanoma derived growth regulatory protein precursor (64% similarity and 45% identity over 111 amino acids)
                                                                                                                                                                                                                                                                                                                                                    Growth regulatory-like polypeptide; human; cartilage; melanoma; neuroectodermal tumour; glioma; cancer; gene therapy; diagnosis;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ford JE, Arterburn MC, Tang YT, Liu C;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 9
or melanoma inhibitory activity, cattle cartilage-derived
retinoic acid sensitive protein (CD-RAP, 44% identity and 64%
similarity over 126 annino acids) and other retinoic acid-sensitive
proteins.
GRLP polypeptides and polymucleotides of the invention
can be used in the prophylaxis, treatment (including gene therapy)
and diagnosis of disorders and diseases caused by, or involving,
cartilage development and maintenance, inhibition of melanoma cell
growth and tumours, including neuroectodermal tumours such as
gliomas The polymucleotides can also be used to design probes
and primers, for chromosome and gene mapping, in the recombinant
production of protein, in the generation of antisense, ribozyme and
production of protein, in the generation of antisense, ribozyme and
production of protein, in the generation of antisense, ribozyme and
production of protein, and cell proliferation octivity,
into any also have cytokine and cell proliferation octivity,
immunosupressive or immunostimulant activity, activity,
immunosupressive or immunostimulant activity, activity, inhibin
activity, chemotactic/chemoKinetic activity, haemostatic and
thrombolytic activity, use in cancer diagnosis and therapy,
drug screening, receptor/ligand activity, antinflammatory
arthritis and inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             181 AAAAAAGGGCAGCAGGTCTATGTGTACTCAAAGCTGGTAAAAGAAAATGGAGCTGGAGAA

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used
                                                                                                                                                                                                  sare, low-toxicity secretory cell function-regulatory protein and encoded DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint diseases

```
The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAFS9063 to AAFS9099 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                              Х,

The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in Arugs, in the diagnosis and development of promoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF5909 and AAB69122 to AAB69132 represent sequences used in the exemplification of the present invention.

The present invention describes novel MLP proteins and their encoding DNAs. The MLP proteins and DNAs have antiinflammatory and cardiant activities, and can be used in gene therapy and as secretory cell function regulators. The MLP proteins and DNAs can be used in drugs, in the diagnosis and development of pronoters and inhibitors for preventing or treating bone and joint diseases as well as pathologic angiogenesis. AAF59063 to AAF59099 and AAB69122 to AAB69132 represent sequences used

Sequence 330 BP; 91 A; 60 C; 92 G; 87 T; 0 other; in the exemplification of the present invention.

Safe low-toxicity secretory cell function-regulatory protein and encoced DNA, applicable as drugs, in diagnosis and development of promoters and inhibitors for preventing or treating e.g. bone and joint

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

384
                                                                                               Perfect score:
                                                                                                                       Scoring table:
                                                                                                        Sequence:
                                                                                                                                                 Searched:
                                                                                                                                                                                                                                                Database
                                                     Run on:
```

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
